

Why does my knee hurt?

Your doctor can evaluate your knee and determine the cause of your knee pain. One of the most common knee injuries is cartilage defects of the femoral condyle (shown below). These typically occur as a result of injury or normal wear and tear. If your doctor has determined you have such a problem then **BioPoly™ RS** may be right for you.

What are my surgical options for treating my knee pain?

Only you and your doctor can select the treatment that is best for you.

What is the BioPoly RS Device?

BioPoly RS is an implant utilizing an advanced biomaterial to resurface (RS) cartilage defects. The **BioPoly RS** material contains hyaluronic acid, a naturally occurring biomolecule found in the joint fluid. This gives the implant enhanced lubricity and allows the femur and tibia to glide against each other without causing pain or additional damage.

So what does this mean?

Your doctor can now replace only the damaged portion of cartilage with an implant that interacts favorably with the surrounding tissues. Since the implant and procedure are minimally invasive you can recover rapidly and return to a pain free active lifestyle quickly.

How much time will I be off work and what is the recovery process?

Only you and your doctor can determine the exact amount of time you will need to recover before going back to work but, however, the **BioPoly RS** implant allows you to begin walking immediately, resulting in rapid rehabilitation and return to activity.
